

ComplexHeatmap Complete Reference Cheat Sheet

by appleacid (appleacid) via cheatography.com/119008/cs/22342/

1.1 General design

A single heatmap is composed of the heatmap body and the heatmap components. The heatmap body can be split by rows and columns. The heatmap components are titles, dendrograms, matrix names and heatmap annotations, which are put on the four sides of the heamap body. The heatmap components are reordered or split according to the heatmap body.

3 Heatmap Annotations

A simple usage of heatmap annotations

column_ha = HeatmapAnnotation(foo1 = runif(10), bar1 = anno_barplot(runif(10)))

row_ha = rowAnnotation(foo2 = runif(10), bar2 = anno_barplot(runif(10)))

Heatmap(mat, name = "mat", top_annotation = column_ha, right_-annotation = row ha)

Color of annotations

library(circlize)

col_fun = colorRamp2(c(0, 5, 10), c("blue", "white", "red"))

ha = HeatmapAnnotation(foo = 1:10, col = list(foo = col_fun))

ha = HeatmapAnnotation(bar = sample(letters[1:3], 10, replace = TRUE),

col = list(bar = c("a" = "red", "b" = "green", "c" = "blue")))

specify more than one vectors

ha = HeatmapAnnotation(

foo = 1:10,

bar = sample(letters[1:3], 10, replace = TRUE),

col = list(foo = col_fun,

bar = c("a" = "red", "b" = "green", "c" = "blue")))

annotation table by df

anno df = data.frame(foo = 1:10,

bar = sample(letters[1:3], 10, replace = TRUE))

ha = HeatmapAnnotation(df = anno_df,

col = list(foo = col_fun,

bar = c("a" = "red", "b" = "green", "c" = "blue")))

anno simple() makes heatmap-like annotations

ha = HeatmapAnnotation(foo = anno_simple(1:10, pch = 1,

pt_gp = gpar(col = "red"), pt_size = unit(1:10, "mm")))

3.4 Block annotation

Heatmap(matrix(rnorm(100), 10), name = "mat",

top_annotation = HeatmapAnnotation(foo = anno_block(gp = gpar(fill = 2:4))),

column_km = 3)

** other annotation graphics

3 Heatmap Annotations (cont)

ha = HeatmapAnnotation(foo = anno_points(runif(10))) #3.6 Points annotation**

ha = HeatmapAnnotation(foo = anno_lines(runif(10))) #3.7 Lines annotation

ha = HeatmapAnnotation(foo = anno_barplot(1:10)) #3.8 Barplot annotation

a barplot annotation which visualizes a proportion matrix

m = matrix(runif(4*10), nc = 4)

m = t(apply(m, 1, function(x) x/sum(x)))

ha = HeatmapAnnotation(foo = anno_barplot(m, gp = gpar(fill = 2:5),

bar_width = 1, height = unit(6, "cm")))

ha = HeatmapAnnotation(foo = anno_boxplot(m, height = unit(4, "-

cm"))) #3.9 Boxplot annotation

ha = rowAnnotation(foo = anno_histogram(m)) # applym on rows

#3.10 Histogram annotation

3.18 Multiple annotations

ha = HeatmapAnnotation(foo = 1:10,

bar = cbind(1:10, 10:1),

pt = anno_points(1:10),

show_legend = c("bar" = FALSE))

Heatmap(matrix(rnorm(100), 10), name = "mat", top_annotation = ha)

4 A List of Heatmaps

The main feature of ComplexHeatmap package is it supports to concatenate a list of heatmaps and annotations horizontally or vertically so that it makes it possible to visualize the associations from various sources of information.

concatenate heatmaps

ht1 = Heatmap(mat1, name = "rnorm")

ht2 = Heatmap(mat2, name = "runif")

ht3 = Heatmap(le, name = "letters")

ht1 + ht2 + ht3

4.1 Titles

draw(ht_list, row_title = "Three heatmaps, row title", row_title_gp =
gpar(col = "red"),

column_title = "Three heatmaps, column title", column_title_gp =
gpar(fontsize = 16))

4.3 Gap between heatmaps

draw(ht_list, ht_gap = unit(1, "cm"))

4.8 Concatenate only the annotations

rowAnnotation(foo = 1:12) +

rowAnnotation(bar = anno_barplot(1:12, width = unit(4, "cm")))

4.9 Vertical concatenation

ht_list = ht1 %v% ht2 %v% ht3; draw(ht_list)

2 A Single Heatmap

2.1 Colors

continueous

library(circlize)

 $col_fun = colorRamp2(c(-2, 0, 2), c("green", "white", "red"), space = "-RGB")$

Heatmap(mat, name = "mat", col = col fun)

discrete

discrete_mat = matrix(sample(1:4, 100, replace = TRUE), 10, 10) colors = structure(1:4, names = c("1", "2", "3", "4")) # black, red, green, blue

Heatmap(discrete_mat, name = "mat", col = colors)

2.4 Set row and column orders

Heatmap(mat, name = "mat", row_order = order(as.numeric(gsub-("row", "", rownames(mat)))),

column_order = order(as.numeric(gsub("column", "", colnames(mat)))))

2.7 Split by categorical variables

split by a vector

Heatmap(mat, name = "mat",

 $row_split = rep(c("A", "B"), 9), column_split = rep(c("C", "D"), 12))$

split by a data frame

Heatmap(mat, name = "mat",

 $row_split = data.frame(rep(c("A", "B"), 9), rep(c("C", "D"), each = 9)))$

Order of slices

Heatmap(mat, name = "mat",

row_split = factor(rep(LETTERS[1:3], 6), levels = LETTERS[3:1]),

column_split = factor(rep(letters[1:6], 4), levels = letters[6:1]),

cluster_row_slices = FALSE,

cluster_column_slices = FALSE)

2.12 Get orders and dendrograms

small_mat = mat[1:9, 1:9]; ht1 = Heatmap(small_mat); row_order(ht1)

2.13 Subset a heatmap

ht = Heatmap(mat, name = "mat")

dim(ht); ht[1:10, 1:10]

7 OncoPrint

If the separators are in ;:,|, oncoPrint() automatically spit the alteration strings##

get_type_fun = function(x) strsplit(x, ";")[[1]]

layer by layer style by specifying alter_fun as a list

col = c(snv = "red", indel = "blue")

oncoPrint(mat,

alter fun = list(

snv = function(x, y, w, h) grid.rect(x, y, w0.9, h0.9,

gp = gpar(fill = col["snv"], col = NA)),

indel = function(x, y, w, h) grid.rect(x, y, w0.9, h0.4,

gp = gpar(fill = col["indel"], col = NA))), col = col)

7.1.2 grid-by-grid style by specifying alter_fun as a single function

oncoPrint(mat,

alter_fun = function(x, y, w, h, v) {

if(v["snv"]) grid.rect(x, y, w0.9, h0.9, # v["snv"] is a logical value

gp = gpar(fill = col["snv"], col = NA))

if(v["indel"]) grid.rect(x, y, w0.9, h0.4, # v["indel"] is a logical value

gp = gpar(fill = col["indel"], col = NA)) }, col = col)

7.1.3 Background

If alter_fun is specified as a list, the order of the elements controls the order of adding graphics. There is a special element called background which defines how to draw background and it should be always put as the first element in the alter_fun list.

7.2 Apply to cBioPortal dataset

$$\begin{split} &\text{col} = \text{c("HOMDEL"} = \text{"blue", "AMP"} = \text{"red", "MUT"} = \text{"$\#008000"}) \\ &\text{alter_fun} = \text{list(} \\ &\text{background} = \text{function(x, y, w, h) } \{ \\ &\text{grid.rect(x, y, w-unit(0.5, "mm"), h-unit(0.5, "mm"), } \\ &\text{gp} = \text{gpar(fill} = \text{"$\#CCCCC", col} = \text{NA})) \}, \\ &\text{HOMDEL} = \text{function(x, y, w, h) } \{ \\ &\text{grid.rect(x, y, w-unit(0.5, "mm"), h-unit(0.5, "mm"), } \\ &\text{gp} = \text{gpar(fill} = \text{col["HOMDEL"], col} = \text{NA})) \}, \\ &\text{AMP} = \text{function(x, y, w, h) } \{ \\ &\text{grid.rect(x, y, w-unit(0.5, "mm"), h-unit(0.5, "mm"), } \\ \end{aligned}$$

gp = gpar(fill = col["AMP"], col = NA))

MUT = function(x, y, w, h) {

grid.rect(x, y, w-unit(0.5, "mm"), h*0.33,

7 OncoPrint (cont)

gp = gpar(fill = col["MUT"], col = NA)) })

7.2.1 Remove empty rows and columns

oncoPrint(mat,

alter_fun = alter_fun, col = col,

remove_empty_columns = TRUE, remove_empty_rows = TRUE, column_title = column_title, heatmap_legend_param = heatmap_legend_param)

7.2.2 Reorder the oncoPrint

sample_order = scan(paste0(system.file("extdata", package = "ComplexHeatmap"),

"/sample order.txt"), what = "character")

oncoPrint(mat,

alter_fun = alter_fun, col = col,

row_order = 1:nrow(mat), column_order = sample_order,

remove_empty_columns = TRUE, remove_empty_rows = TRUE,

column_title = column_title, heatmap_legend_param = heatmap_legend_param)

7.2.3 OncoPrint annotations

oncoPrint(mat,

alter_fun = alter_fun, col = col,

top annotation = HeatmapAnnotation(

column_barplot = anno_oncoprint_barplot("MUT", border = TRUE, # only MUT

height = unit(4, "cm"))),

right_annotation = rowAnnotation(

row_barplot = anno_oncoprint_barplot(c("AMP", "HOMDEL"), # only AMP and HOMDEL

border = TRUE, height = unit(4, "cm"),

axis_param = list(side = "bottom", labels_rot = 90))),

remove_empty_columns = TRUE, remove_empty_rows = TRUE, column_title = column_title, heatmap_legend_param = heatmap_l-

add more annotations in HeatmapAnnotation() or rowAnnotation()

oncoPrint(mat,

egend param)

alter fun = alter fun, col = col,

remove_empty_columns = TRUE, remove_empty_rows = TRUE, top_annotation = HeatmapAnnotation(cbar = anno_oncoprint_barplot(),

foo1 = 1:172,

bar1 = anno_points(1:172)),

left_annotation = rowAnnotation(foo2 = 1:26),

right_annotation = rowAnnotation(bar2 = anno_barplot(1:26)),

7 OncoPrint (cont)

column_title = column_title, heatmap_legend_param = heatmap_legend_param)

split the heatmap list

ht_list = oncoPrint(mat,

alter fun = alter fun, col = col,

column_title = column_title, heatmap_legend_param = heatmap_legend_param) +

Heatmap(matrix(rnorm(nrow(mat)*10), ncol = 10), name = "expr", width = unit(4, "cm"))

draw(ht_list, row_split = sample(c("a", "b"), nrow(mat), replace =
TRUE))

Get the subset of rows and columns

rownames(ht@matrix); colnames(ht@matrix)

5 Legends

5.1 Continuous legends

library(circlize)

 $col_fun = colorRamp2(c(0,\, 0.5,\, 1),\, c("blue",\, "white",\, "red"))$

Igd = Legend(col_fun = col_fun, title = "foo")

5.2 Discrete legends

lgd = Legend(labels = month.name[1:6], title = "foo", legend_gp = gpar(fill = 1:6))

5.4 Heatmap legends

m = matrix(rnorm(100), 10)

Heatmap(m, name = "mat", heatmap_legend_param = list(

at = c(-2, 0, 2), labels = c("low", "zero", "high"),

title = "Some values",legend_height = unit(4, "cm"),

title_position = "lefttop-rot"
))

5.4 annotation legends

ha = HeatmapAnnotation(foo = runif(10), bar = sample(c("f", "m"), 10, replace = TRUE),

annotation_legend_param = list(

foo = list(title = "Fooooooh",at = c(0, 0.5, 1), labels = c("zero", "median", "one")),

bar = list(title = "Baaaaaaaar",at = c("f", "m"),labels = c("Female", "-Male"))))

Heatmap(m, name = "mat", top_annotation = ha)

5.6 The side of legends

draw(ht_list, heatmap_legend_side = "left", annotation_legend_side
= "bottom")
